Hepatitis means a diseased liver. It can be due to virus, alcohol, infection, drugs and habits of body to recognize its own cells (autoimmune). Chronic viral hepatitis can be due to Hepatitis A, B, C or E.

80,000 people in Chennai are infected with Hep C

95% of those who are infected don’t know.

87% of people who have Hepatitis C are unaware of their condition.

HEP A & E

Can be prevented, can’t be cured.

Proteins in your food can weaken the hepatitis A virus.

HEP D

The virus that causes Hep C can exist only if it occurs after Hep B.

HEP B

Can be prevented, can’t be cured.

Can live with Hepatitis B and have normal sex without transmission.

HEP C

Chronic No jaundice Causes Cirrhosis Cancer BUT Curable

Test for Hep C antibodies and get tested for Hep C virus carriership.

ALDHEP
